

# The Power Of Knowing

The first step upon the path to success is equipping your life savings with Market Guard. The chart below is a hypothetical example of how Market Guard utilizes a non-emotional, methodical, mathematical algorithm to signal when to sell, buy and hold the individual investments within the portfolio.

- Market Guard™
- S&P 500
- Dynamic Wealth Indicator™

## INTELLIGENT DESIGN

The most important step to successful investing is identifying the proper asset allocation to achieve your desired goals. See Jenkins Wealth portfolio models.

## KEEPING DISCIPLINED

Remaining in the market during periods of normal fluctuation is critical to success. Knowing you are invested with a strategy like Market Guard can provide peace of mind.

## PROTECTING GROWTH

If the intelligence indicators signal to exit the underlying investment position, it will communicate the quantity of shares to sell in effort to help protect from unnecessary losses and volatility.

## RE-ENTER THE MARKET

When the intelligence indicators signals to re-enter, it will communicate the quantity of shares to purchase.

## MONITOR & REBALANCE

A consistent review/monitoring process keep the portfolio's risk and target goals in check.
